***Election/Restriction***

I. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-2,5-8,11-12, drawn to a method of transferring a message between a plurality of nodes forming a ring, classified in class 709, subclass 238.

II. Claims 3-4, 9-10, drawn to a method of transferring a message between a plurality of nodes forming a ring, wherein each pair of adjacent nodes forms a group and any two adjacent nodes have node identifiers different from each other, classified in class 709, subclass 204.

II. The inventions are distinct, each from the other because of the following reasons Inventions I, and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a fault detection system that detects the presence or absence of a fault in a ring using node ID; Invention II has separate utility such as a fault detection system that detects the presence or absence of a fault and maximizes the number of nodes in ring using group IDs. See MPEP. § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. During a telephone conversation with Samson Helfgott, attorney, on 8/30/04 to request an oral election to the above restriction requirement, but did not result in an election being made.
